

Maintenance Instructions Coir Fibre Entrance mats

In order to safeguard the effectiveness of your Rinos coir fibre entrance matting and to extend its life, we recommend cleaning your coir mats on a regular basis.

Daily maintenance

- Vacuum the dry dirt on your coir fibre entrance matting preferably with a professional vacuum cleaner with a driven, rotating brush or a consumer vacuum cleaner with Class C dust extraction from carpet.
- Allow wet areas to dry out fully and then treat as dry dirt.

By vacuuming your coir entrance matting regularly the dirt is loosened effectively and removed. Your coir mat will have a fresh, clean look and will retain its effectiveness.

The dirt can be beaten out of loose laid coir fibre mats outside.

We advise against cleaning your coir mat with moist.
